

Twin Studios

3D Warehouse Generator

1. Describe a space in one sentence, or drop photos of it.

2. The AI drafts a full 3D environment as one JSON document.

3. MongoDB stores it as version 1. The data is already a document, so there is no mapping layer.

1. Move, rotate, add, and delete objects in 3D.
2. The validator flags overlaps and out-of-bounds objects as you drag.
3. Every save is a new version in MongoDB. A transaction keeps the head pointer correct, and a stale save gets a 409 instead of overwriting.

1. One click prints a scaled A4 plan with a legend, an object schedule, and the revision list.

2. The plan comes from the saved version, so the print matches what is in MongoDB.

3. Atlas Vector Search with Automated Embedding finds similar environments. Atlas does the embedding, so we store no vectors
